The QE Index ended its three-consecutive day winning streak and slid lower on the back of profit-booking. The index managed to recoup majority of its losses after testing its intraday low near 11,140 and rebounded. However, the index needs to sustain above 11,240, to trigger fresh buying interest which can push the index higher towards 11,300. On the flip side, any failure to move above 11,240, can drag the index lower to test the 11,145 level.

The Index managed to gain last week and closed just above the consolidation range. Moreover, the index defended its 50-WMA currently near 10,760, and breached the 200-WMA currently near 10,920, showing positive signs. However, the index needs to sustain above the 11,050 level, for attracting any further buying interest, which can push the index higher towards 11,250. On the flip side, any sustained weakness below the 200-WMA can drag down to 10,760.

The QE Index managed to bounce back and stay above its mid-bollinger band, after witnessing correction over the past few months. However, the index needs to move above its 50 MWA currently near 11,000 to show any follow up buying. Meanwhile, the index is trading near its mid-bollinger band support currently near 10,530. Any sustained weakness below it may drag the index further lower to test its 100-MWA near 10,430. On the other hand, a move above its 50-WMA can trigger buying interest and can test its 11,250.
