- The lowest category does not mean a risk-free investment.
- The risk and reward profile may change over time.
- Historical data may not be a reliable indication for the future.
- This fund is in category 6, since the share price has a high volatility and therefore the risk of loss as well as the expected reward may be high.

The following risks may not be fully captured by the risk and reward indicator:

- Assets may be traded in markets where custodial and/or settlement systems are not fully developed and may be exposed to additional risks to those in more developed markets.
- The value of the Fund's investments may be affected by uncertainties such as international policy developments and changes in government policies.
- The investments of the Fund are exposed to emerging markets, which may result in greater risk of loss than investments in developed markets. Several factors such as market volatility, liquidity issues, limited securities markets etc. may have adverse effects on the Fund's returns.
- The return from your investment in this Fund is not guaranteed and your investment is at risk. The value of your investment may go down as well as up.
- Since the Fund does not hedge currency risk, any depreciation of the currencies in which the Fund's assets are denominated against USD will negatively impact the Fund returns in USD.

A complete description of risk factors is set out in the Prospectus of the ICAV (the 'Prospectus') in the section entitled 'Risk Information'.
